

HRISHABH SHRIVASTAVA

Full Stack Developer

Gwalior, MP | +91 7987037882 | hrishabhshrivastava16@gmail.com | github.com/hrishabh1416 | linkedin.com/in/hrishabh-shrivastava

SUMMARY

Full Stack Developer specializing in the MERN stack (React.js, Node.js, Express.js, MongoDB), with hands-on experience engineering secure, scalable, production-grade applications — including role-based access control systems, real-time features, and AI-integrated workflows (Generative AI, LLM integration, prompt engineering) — through internship experience and independent full-stack projects.

EDUCATION

Madhav Institute of Technology and Science

2023 – 2027

Bachelor of Technology (B.Tech) in Information Technology — CGPA: 7.95/10

EXPERIENCE

Software Developer Intern — Apaxion Technologies LLP

Sep 2025 – Jan 2026

Technologies: JavaScript, React.js, Node.js, Express.js, MongoDB, JWT, Git

- Engineered a full-stack **Super Admin module** for a restaurant management platform, implementing backend **RBAC** for Super Admin and Operational User roles, with centralized restaurant, user, and subscription lifecycle management including configurable plans, pricing, access levels, upgrades/downgrades, and extensions.
- Designed a centralized **global discount engine** and **real-time notification system**, automatically applying **configurable percentage discounts** across all cart items alongside item-level pricing rules, and delivering order/update alerts to customers and restaurant owners via an **in-app notification UI**.
- Optimized frontend performance across both applications by implementing **lazy loading, pagination, and virtual scrolling** for large lists, cutting initial load time by an **estimated 60–70%** and reducing memory consumption while improving scroll performance.

TECHNICAL SKILLS

- Programming Languages:** C, C++, Python, JavaScript
- Frontend:** HTML5, CSS, React.js, Vite, Tailwind CSS, Context API, Bootstrap
- Backend & Databases:** Node.js, Express.js, Mongoose, REST API, JWT Authentication, Socket.io, MongoDB, MySQL
- AI:** Generative AI, LLM Integration, Prompt Engineering
- Core CS:** Data Structures & Algorithms, Object-Oriented Programming (OOPS), DBMS, SQL, Operating Systems, Computer Networks

PROJECTS

ERAMS — Employee Resource and Access Management System

Github — <https://github.com/hrishabh1416/ERAMS> | **Live-Demo** — <https://erams-brpn.onrender.com>

- Built a **role-based access control (RBAC) system** featuring JWT-based authentication, bcrypt password hashing, and middleware-enforced role permissions across Admin, Employee, and Approver roles, with **100% of authorization checks validated server-side** to block client-side bypass.
- Developed a **dynamic form-builder** allowing Admins to define custom request types and fields at runtime, with forms rendered from stored schema configs — cutting new request-type deployment time by **~90%**.
- Established a **multi-level approval workflow** with configurable approval stages, assigned approvers, and complete audit history, enforcing server-side validation to prevent unauthorized or out-of-sequence approvals — cutting typical approval cycle time by approximately **75%** versus manual, email-based routing.
- Integrated **Generative AI** to auto-generate request priority levels and summaries for approvers, trimming per-request review and approval time by close to **80%**.

Quick Chat — Real-Time Chat Application

Github — <https://github.com/hrishabh1416/Quick-Chat> | **Live-Demo** — <https://chat-app-ccqc.onrender.com/>

- Architected a full-stack **real-time chat application** (React, Node.js, Express, MongoDB) backed by JWT authentication, bcrypt-secured passwords, and protected-route middleware, with **100% of chat APIs validated server-side** against unauthorized access.
- Implemented **real-time bidirectional messaging** using Socket.IO, cutting message delivery latency from polling-based intervals (seconds) to near-instant delivery (<1s) — a roughly **90% reduction** versus a traditional HTTP-polling approach.
- Structured a **decoupled persistence layer** storing full message history in MongoDB independent of the Socket.IO connection, ensuring **100% conversation history retention** across user disconnects/reconnects.
- Resolved **Socket.IO lifecycle issues** within React's Context API and component re-renders, eliminating duplicate socket connections and redundant event listeners for a stable, single-connection-per-user architecture.

ACHIEVEMENTS

- Finalist, Next Gen Hackathon — organized by the ACM Chapter, California, and the Soft Research Society, New Delhi.
- Top 20 performing candidate, ET AI Hackathon — organized by The Economic Times.
- 5-star rating in Problem Solving in (C++) on HackerRank; solved 250+ problems across LeetCode, CodeChef, and HackerRank.
